

Lab 02 - Populate the Storyboard with Course Content

Course: Mastering Articulate Storyline 360 for e-Learning Content Creation (TGS-2024042308) Version: v9 | 21 August 2026

Scenario

The same camping course now needs meaningful module descriptions and supporting imagery before stakeholder review.

Objective

Turn a skeletal template into a storyboard-aligned three-slide course overview using reusable project assets.

Supplied Articulate Storyline files

- 03_02_BEGIN.story
- 03_02_END.story

Detailed procedure

1. Create Lab-02-YourName.story from 03_02_BEGIN.story and open it locally.
2. Review the learning promise and define the purpose of each of the three slides.
3. Write concise learner-facing descriptions for campsite selection, campfire safety and essential toiletries.
4. Import or replace the supplied supporting pictures through the Media Library so assets remain traceable.
5. Use slide titles, hierarchy, alignment and spacing to make the intended reading order obvious.
6. Add meaningful alternative text; remove decorative objects from the focus order where appropriate.
7. Preview each slide at Fit and 100% zoom and test keyboard focus order.
8. Compare against 03_02_END.story and record how the storyboard maps to the final slide content.
9. Save the completed working file and evidence screenshots.

Evidence to retain

Retain the completed .story file, a three-screen storyboard table and accessibility/focus-order screenshots.

Acceptance criteria

- [] Each slide has one clear purpose and concise copy.
- [] The three descriptions and visuals match the intended module topics.
- [] Focus order and alternative text support meaningful navigation.
- [] The project previews without missing media.

Reflection prompts

- Which storyboard or audience requirement drove your most important decision?
- Which Storyline panel, trigger or setting proves that decision is implemented?

- What accessibility, rights or publishing evidence must accompany the finished project?
