

Lab 06 - Build a Multi-Slide Audio and Caption System

Course: Mastering Articulate Storyline 360 for e-Learning Content Creation (TGS-2024042308) Version: v9 | 21 August 2026

Scenario

A three-slide course needs consistent narration, caption files and learner control across the whole scene.

Objective

Implement multiple audio/caption tracks consistently and validate timing, focus and playback behaviour across slides.

Supplied Articulate Storyline files

- 05_02_BEGIN.story
- 05_02_END.story

Detailed procedure

1. Create Lab-06-YourName.story from 05_02_BEGIN.story.
2. Inventory the supplied MP3 and VTT assets and map each pair to its target slide.
3. Import each narration track and apply a consistent naming convention in the timeline and Media Library.
4. Attach the matching caption file and correct text/timing errors.
5. Set playback and slide-advance behaviour so narration is neither cut off nor repeated unexpectedly.
6. Expose caption and volume controls consistently in the player.
7. Verify focus order, alternative text and accessible object visibility on every slide.
8. Preview the complete scene using normal navigation, replay and revisit; log any resume differences.
9. Compare with 05_02_END.story, save the completed .story file and test matrix.

Evidence to retain

Retain the completed .story file, media map, scene-wide audio/caption test matrix and representative screenshots.

Acceptance criteria

- [] All audio and captions map to the correct slides.
- [] Naming and control behaviour are consistent.
- [] Revisit/replay does not create overlapping or missing narration.
- [] Keyboard and caption checks pass on every slide.

Reflection prompts

- Which storyboard or audience requirement drove your most important decision?
- Which Storyline panel, trigger or setting proves that decision is implemented?

- What accessibility, rights or publishing evidence must accompany the finished project?
