Activity 08 — Build Branching and Freeform Decisions

Course: Mastering Articulate Storyline 360 for e-Learning Content Creation (TGS–2024042308) **Version:** v11 · 17 October 2026

Scenario

HarbourLink Logistics needs an 8–10 minute annual WSH refresher for frontline warehouse operators, including learners with low reading confidence. Build a picture-first module with short plain-English labels, narration, captions, purposeful interaction, keyboard equivalents and a five-question 80% practice quiz.

Objective

Create consequence-based decisions and an accessible freeform interaction.

Supplied files and checkpoint

- Continue from/save as `HarbourLink–WSH–Checkpoint–08–YourName.story`.
- Shared runnable assets are under `../source/`.
- A completed `.story` solution is not supplied; build and test the project in Storyline 360 on Windows.

Detailed procedure

1. Open HarbourLink-WSH-Checkpoint-07 and Save As HarbourLink-WSH-Checkpoint-08-YourName.story.
2. In existing scene `03 Practise`, open storyboard placeholder `WSA–210 Spill Decision`; do not create a duplicate ID.
3. Create three choice buttons and three Dialog consequence layers; add choice-click Show layer triggers for this ungraded branch prototype.

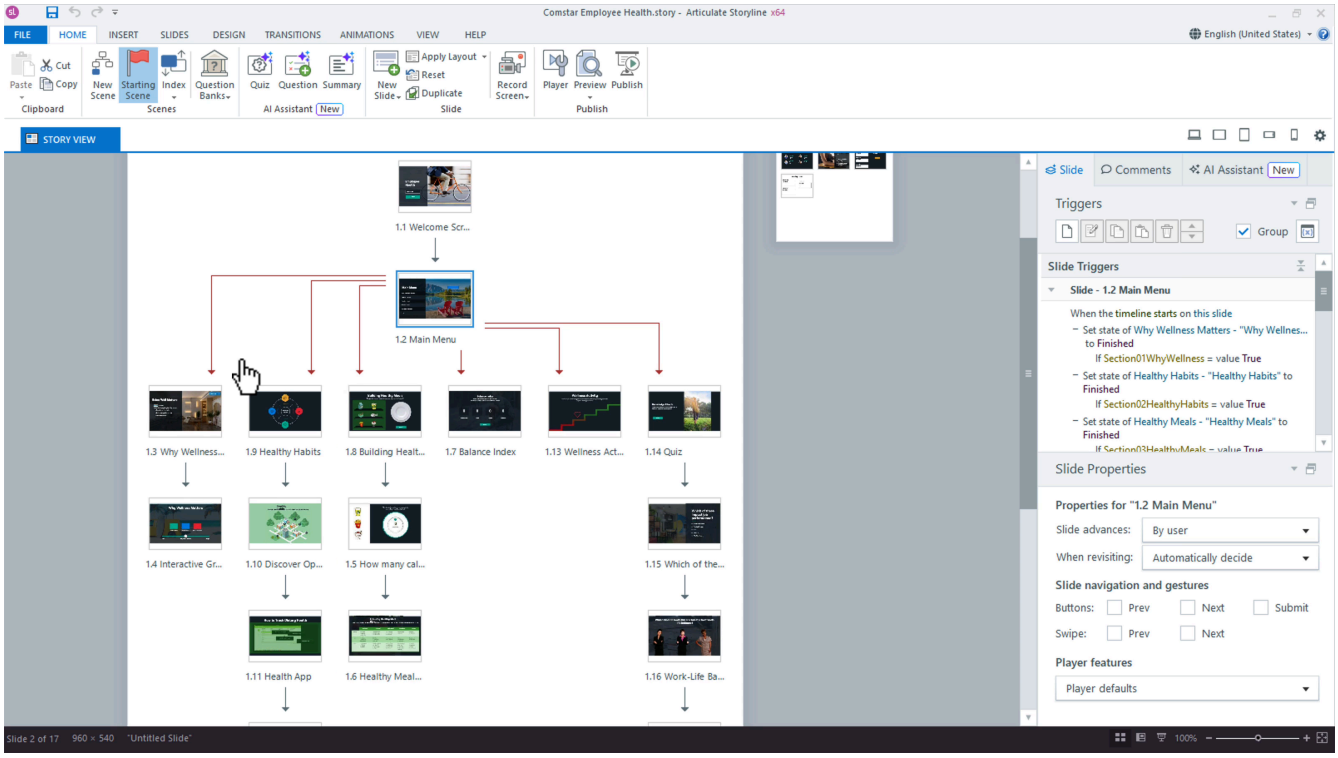

Figure 8.1 — Step 3: Story View branching map. Authentic Articulate tutorial/product guidance; example values may differ, so verify the named control in your own checkpoint.

1. Create or open placeholder `WSA–220 Reconvergence`; add Continue triggers from each consequence layer to WSA-220 and test all three paths.
2. Duplicate WSA-210 so the working ungraded branch remains a rollback reference.

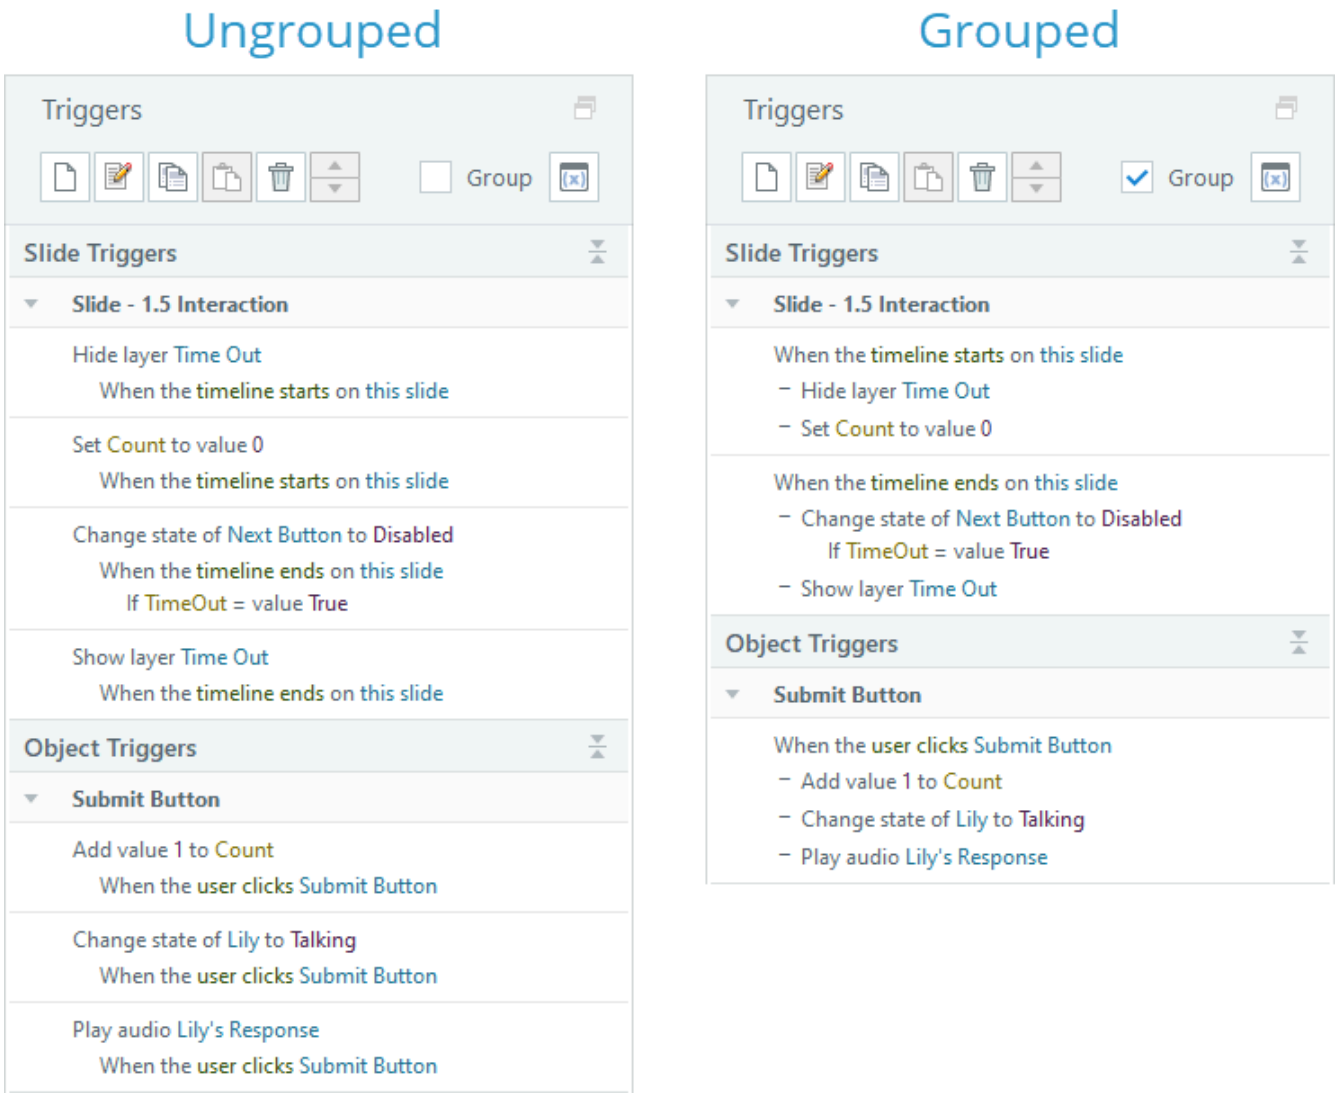

Figure 8.2 — Step 5: Grouped branch triggers. Authentic Articulate tutorial/product guidance; example values may differ, so verify the named control in your own checkpoint.

1. On the duplicate, delete every old choice-click Show layer, Jump, and feedback trigger before conversion.
2. Select the three decision objects and choose Insert > Convert to Freeform > Pick One.
3. In Form View assign each object to its response and mark the approved control as correct.

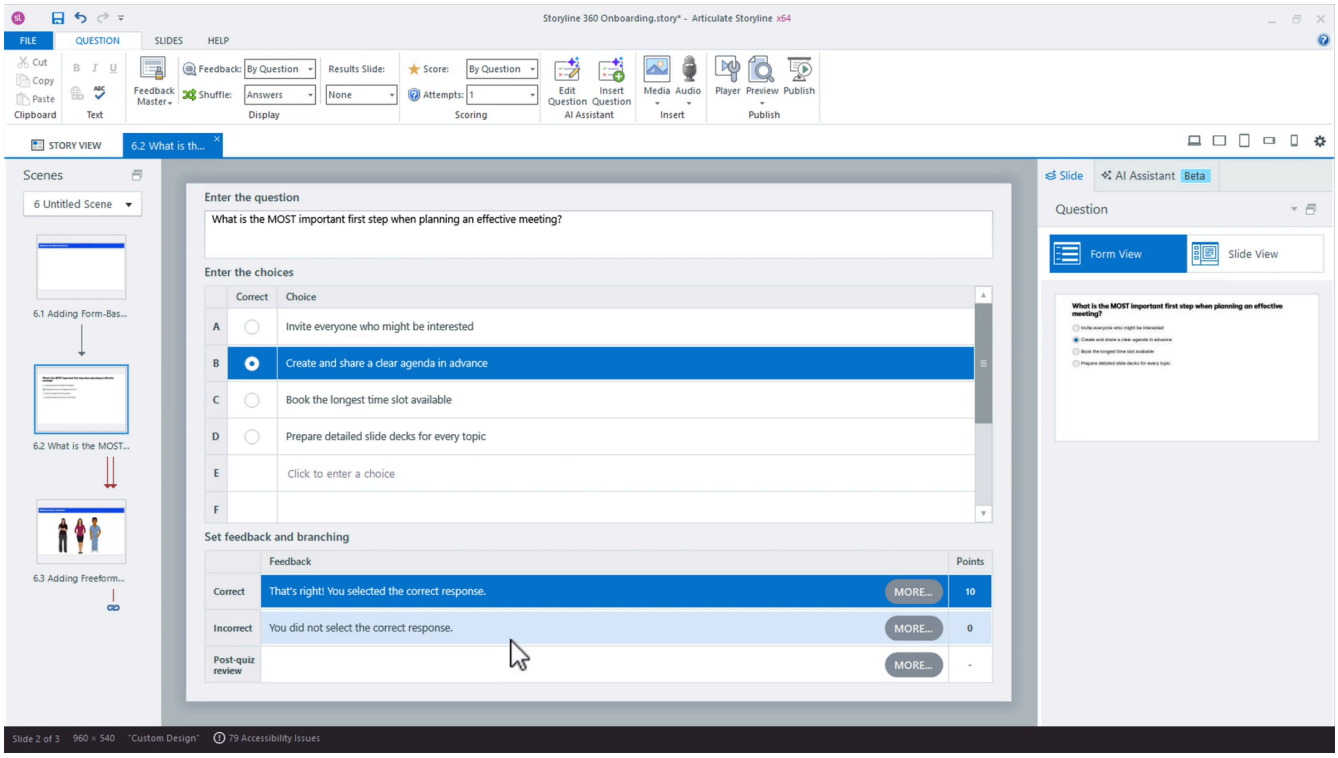

Figure 8.3 — Step 8: Authentic Form View: response choices, correct radio and feedback fields. Authentic Articulate tutorial/product guidance; example values may differ, so verify the named control in your own checkpoint.

1. Use the interaction Submit button; do not reveal feedback or navigate when a choice is merely clicked.
2. Edit the generated Correct, Incorrect, and Try Again layers with plain-English consequence and next action.
3. Set attempts and feedback behaviour in Question Tools — Design; keep Try Again only while another attempt remains.
4. Add Continue from submitted feedback to `WSA-220 Reconvergence`.
5. Open Focus Order and place prompt, choices, Submit, and feedback controls in logical order.
6. Preview without Submit, then submit correct, incorrect, and retry paths; confirm scoring and reconvergence.
7. Save and capture the original branch, cleaned duplicate triggers, Form View, feedback layers, score, and reconvergence.

Evidence to retain

Retain the named .story checkpoint, the completed self-check table and one screenshot for each task showing the final state or setting that proves the acceptance criteria.

Acceptance criteria

- [ ] All branches reach feedback and continuation.
- [ ] Freeform scoring matches the specification.
- [ ] Feedback explains consequence.
- [ ] Equivalent keyboard route is complete.

Reflection prompts

- Which storyboard or audience requirement drove your most important decision?
- Which Storyline panel, trigger or setting proves that decision is implemented?
- What accessibility, rights or publishing evidence must accompany the finished project?
